Senior Data Engineer · Financial Data Products

Azure · Snowflake · dbt · Python · SQL · Airflow · Terraform

SUMMARY

Senior data engineer on the Financial Data Products team at Pantheon, working with financial data from SAP and other systems on Azure and Snowflake. I've worked with data for more than 15 years, and remotely since 2021. My work covers ingestion, ETL/ELT pipelines, transformations with dbt, lakehouse design, CI/CD and infrastructure as code.

Before data engineering I spent about 10 years on the database and infrastructure side, as a DBA at the Rio de Janeiro State Court and at Senac RJ (Oracle RAC, Data Guard, SQL Server, PostgreSQL, Linux, AIX). I still use a lot of that experience, mainly for performance tuning and data modeling.

SKILLS

Data platform	Snowflake, Azure Data Factory, Azure Functions, Azure Blob Storage, Azure SQL, Azure Databricks, AWS (S3, Lambda, Redshift)
Sources	SAP (ERP), REST APIs
Pipelines & modeling	dbt, Apache Airflow, Apache NiFi, Snowpipe, SSIS, ETL/ELT, lakehouse (medallion), data modeling
Languages	Python, SQL, PL/SQL, Shell, PowerShell
DevOps & infra	Terraform, Azure DevOps, GitHub Actions, Git, Docker, Kubernetes (AKS), Linux, AIX, high availability, disaster recovery
Databases	Oracle (RAC, Data Guard, RMAN), SQL Server, PostgreSQL, MariaDB, MySQL, MongoDB, Redis
Governance & BI	Data governance, LGPD, performance tuning, Power BI, Tableau

EXPERIENCE

Senior Data Engineer

Oct 2021 – Present

Pantheon Inc · Financial Data Products team · Remote

I'm part of the Financial Data Products team, where I take care of the data platform on Azure and Snowflake. We bring data from SAP and other source systems and APIs into a single lakehouse, and turn it into data products that business teams and leadership use for financial reporting and decisions.

- Designed the lakehouse architecture (landing, bronze, silver and gold) on Azure Blob Storage and Snowflake
- Built the ingestion for SAP and API sources with Python on Azure Functions, Snowpipe and Azure Data Factory
- Data transformations and models with dbt on Snowflake, which feed the financial data products
- Pipeline orchestration with Airflow, Azure Data Factory and NiFi (lambda architecture)
- Refactoring SQL views, stored procedures and SSIS packages to improve performance
- CI/CD for data projects with Azure DevOps and GitHub Actions; infrastructure as code with Terraform
- Data governance and curated datasets for Power BI and Tableau

Stack: Python, SQL, dbt, Snowflake, SAP, REST APIs, Azure Data Factory, Azure Functions, Azure SQL Database, Azure Blob Storage, Azure Key Vault, Airflow, NiFi, SSIS, SQL Server, Terraform, Azure DevOps, GitHub Actions, Power BI, Tableau

Senior Database Administrator

Jul 2020 – Oct 2021

Senac RJ · Rio de Janeiro, Brazil

Technical lead for database and infrastructure (SQL Server, Oracle, MongoDB and Redis) at Senac RJ, a professional education institution. I also worked on the application modernization project and on the first data architecture on Azure.

- Application modernization project: infrastructure as code, CI/CD pipelines in Azure DevOps and SQL databases on Azure
- Designed the data architecture with Azure Data Factory and Azure SQL
- Led the technical side of the LGPD (Brazilian data protection law) rollout

- DevOps lead for the development team: Azure DevOps pipelines, images in Azure Container Registry, deployments on AKS
- Backups, restore tests and replication for disaster recovery; automation with PowerShell, shell scripts and Python
- Query and index tuning, patching, data integration and database migrations

Stack: SQL Server, Oracle, MongoDB, Redis, Azure Data Factory, Azure SQL, Azure DevOps, ACR, AKS, Azure Key Vault, Azure Databricks, PowerShell, Python, .NET

Senior Data Engineer

Mar 2020 – Jul 2020

CovidZero · Remote

CovidZero was a project run by volunteers and NGOs to give the public reliable information about COVID-19, using data from hospitals. I built the data side on AWS: a serverless architecture with AWS Lambda, a data lake on S3 with Python functions that ingested the hospital data, and pipelines that loaded curated data into Redshift.

Stack: Python, AWS Lambda, S3, Redshift, Aurora, Git

Senior Database Administrator

Nov 2013 – Jul 2020

Rio de Janeiro State Court (TJRJ) · Rio de Janeiro, Brazil

Senior DBA responsible for the database infrastructure behind the systems used across the state's judiciary. My focus was infrastructure and databases: high availability, disaster recovery, performance and upgrades, with Oracle running on AIX and Linux.

- Administered a two-node Oracle RAC and Oracle Data Guard on AIX; managed a MariaDB Galera Cluster on Linux
- Planned and ran database installations, migrations and version upgrades (Oracle 10g through 19c)
- Wrote PL/SQL and shell scripts to automate database work, and materialized views for data replication
- Performance tuning and preventive maintenance; backup and recovery with RMAN and exp/imp
- Infrastructure planning and support for development teams on database-side deployments

Stack: Oracle (RAC, Data Guard, RMAN), PL/SQL, MariaDB, PostgreSQL, AIX, Red Hat, CentOS

EARLIER EXPERIENCE

BI Analyst · MJV Technology & Innovation — Aug 2013 – Oct 2013

ETL processes with Informatica PowerCenter and PL/SQL on Oracle.

Database Administrator · UniNorte, Manaus — Jun 2012 – Jul 2013

Database infrastructure behind the university's academic systems, similar to the court but in education, including peak periods like enrollment. Two-node Oracle RAC and Data Guard on CentOS; PL/SQL and shell automation, tuning, RMAN backups, upgrades (Oracle 8i to 11g).

Systems Support Consultant · Gemalto — Sep 2011 – May 2012

Support for a telecom platform on Oracle and Red Hat: shell scripting, database installation and backups, SQL tuning.

Systems Analyst · Globo.com — Jun 2009 – Oct 2011

Python and shell scripting, platform support, NGINX monitoring, Oracle and MySQL queries.

Technical Support Analyst · Ministry of Agriculture, São Paulo — Aug 2008 – Jun 2009

Application support, user support and database support.

EDUCATION

Executive MBA, Business Intelligence
IGTI · 2021 – 2022

Executive Program, Big Data Analytics
Fundação Getulio Vargas (FGV) · 2018 – 2019

Bachelor of Technology, Process Management
Fundação Getulio Vargas (FGV) · 2012 – 2014

CERTIFICATIONS

Hands On Essentials (5 badges)
Snowflake · Data Warehouse, Data Lake, Data Engineering, Data Applications, Data Sharing · 2023

Apache Airflow Fundamentals
Astronomer · 2022

Lakehouse Fundamentals (Academy Accreditation)
Databricks · 2022
